

SurePassID Push Authentication Datasheet

Simple and Strong Mobile Two-Factor Authentication

SurePush Authentication Mobile app is the most secure and quickest login method for all types of users. SurePass Push is the only solution with a unique embedded FIDO key that provides two-factor authentication built-in to the mobile phone. If an on-phone or wearable biometric is used, the password can be eliminated.

SurePush Authentication app turns your mobile phone into a universal authentication device that prevents hackers from stealing your login credentials and keeps them from gaining access to your accounts and transactions.

SurePass Push Authentication – The Right Choice for...

Large enterprises and government organizations mandated to reduce customer authentication costs yet increase security or needing to comply with security regulations.

Small and medium enterprises needing a low cost solution for highly effective two-factor authentication or needing to comply to PCI requirements.

Companies seeking to securely embrace mobile technologies such as mobile banking and mobile wallet access with a simple, effective and low cost strong security solution.

Features

- **Easy and Strong Mobile Authentication** – No codes to enter, no devices to carry. Use what you already have – your mobile phone.
- **Works with Biometrics** – Use the on-phone fingerprint sensor, voice recognition or face recognition options. Or use a biometric device you may already have such as the Nymi Band or Plantronics Bluetooth Headsets.
- **FIDO security embedded** – When the SurePush app is downloaded, it installs a unique FIDO key which cannot be guessed or duplicated. It's transparent to the user for simplicity.
- **Out-of-band authentication** – ensures that where ever the user is logging in, a SurePush Authentication will be sent for approval, identifying the date, time, IP address and account requesting access.
- **Alternate Methods available** – Users can choose different or back-up authentication methods such as voice call, enter a one-time passcode from an OTP device, SMS Text response (reply with Y/N), and others.
- **Quickest, strongest and most convenient user experience:**
 1. Enter username and password into app login screen.
 2. Select SurePush as the authentication method.
 3. When the Push Authentication arrives on your phone, simply tap the “Approve” icon.

Benefits

- Easy and Strong logins
- Secure, compliant access, FIDO certified
- Maximum flexibility
- Rapid deployment
- Reduced costs and complexity
- Scalable and reliable
