

## TapID Treo 3-in-1 FIDO U2F Security Key

### Three Authentication Methods in One Convenient Device for Account Logins

- 1) **FIDO U2F USB Key** - insert into any USB port to deliver a one-time FIDO key code
- 2) **FIDO U2F NFC Contactless Key** – works with Android phones with NFC (Near-Field Communication) capability – just Tap ‘n Go to authenticate with a FIDO key code
- 3) **OATH HOTP** - standard OATH 6-digit event-based One-Time Password via USB for applications that need an OATH OTP such as VPN connections

*TapID FIDO Key via NFC – just tap to any NFC-enabled device*

*TapID Treo USB FIDO Key – touch to send FIDO code; touch to send OTP (it knows which to send)*

**SurePassID TapID™ Treo** combines FIDO U2F and OATH authentication functions in one convenient, low cost device. Register the FIDO token with any FIDO-enabled website or mobile app such as Google, DropBox, GitHub and others. Use the OTP for VPN and other OATH-enabled applications.

**To register your FIDO Key** - refer to the FIDO registration instructions from your network administrator or the instructions provided by your FIDO-enabled website or mobile app.

**To obtain your OATH OTP Seed file** – If you are using SurePassID Authentication Service, the serial number and secret key will be uploaded into your account. If you are not using SurePassID Authentication Services, the serial number and secret key of the built-in OATH OTP code are printed and attached separately. Please keep this in a safe and secure place. If you require the secret key file in a machine readable format please contact [support@surepassid.com](mailto:support@surepassid.com).

**Need an Authentication Server or Cloud Service?** Contact a SurePassID representative today to [sign up for a free 2-month trial of SurePassID Authentication Service](#) for two-factor authentication solutions for web, mobile and enterprise applications.

Visit our website for more authentication products and services.

All TapID™ products work with **SurePassID Authentication Service and other certified OATH and FIDO servers - SurePassID Server and TapID™ Treo are FIDO-Certified.**
