

SurePassID Push Authenticator Datasheet

Easy, One-Tap Strong Authentication for Mobile Devices

SurePassID Push Authenticator turns any mobile device into a universal authenticator for multi-factor authentication (MFA). With one tap, users verify their identity by approving a push notification before logging into Windows or their other applications. Denying an unfamiliar login attempt is just as quick and easy, enabling users to stop fraudulent access attempts by hackers.

If a mobile network connection is unavailable or prohibited, **SurePassID Push Authenticator** can generate time-based one-time (TOTP) or event-based one-time (HOTP) passcodes that enable users to complete the authentication process.

SurePassID Push Authenticator is a free app for Android and iOS devices and can be downloaded from the Google Play Store and App Store.

Multi-Factor Authentication (MFA) with the Best User Experience

SurePassID Push Authenticator provides users with the fastest, most convenient means of secure access. Using their mobile device, users simply:

1. Enter their username and password into the login screen
2. Choose **SurePassID Push Authentication** as the authentication method
3. When the Push Authentication Request arrives on their phone, they simply tap the “Authenticate” icon – or “Cancel” if the access attempt is fraudulent

The result is NIST 800-63B compliant secure access that users will readily adopt and use.

About SurePassID

SurePassID is a provider of highly secure, highly extensible identity and access management solutions for Zero Trust compliance. SurePassID seamlessly integrates with hybrid cloud infrastructures to enable trusted access to any application, on any device, by any user. SurePassID offers multi-factor authentication with push and offline authentication, passwordless authentication, trusted single sign-on, directory and reporting integration, adaptive authentication policies, powerful administrative automation, and an API/SDK for integration with customer applications and platforms.

SurePassID Push Authenticator Datasheet

Easy, One-Tap Strong Authentication for Mobile Devices

Features

- **Best multi-factor authentication (MFA) user experience** – No passcodes to enter, no additional hardware tokens to carry.
- **Over-the-air provisioning** – Unlike other mobile authenticator apps, SurePassID Push Authenticator users can add new tokens over the air with the SurePassID authentication server while never exposing the cryptographic key.
- **Additional over-the-air provisioning security** – SurePassID Push Authenticator supports the ability to challenge users to enter a passcode to provision a token.
- **Third-party provisioning compatibility** – SurePassID Push Authenticator supports account provision via Google Authenticator QR code and many others.
- **Full logging for Syslog or other SIEM integration** – SurePassID Push Authenticator and the SurePassID MFA platform ensure that whenever the user logs in, the approved or canceled push request identifies the date, time, IP address, and user account requesting access.
- **Widest choice of alternative authentication methods** – In addition to SurePassID Push Authenticator, users can choose whichever different or backup authentication methods are enabled by administrators, such as voice call, time-based one-time (TOTP) or event-based one-time (HOTP) passcode from a hardware token, SMS Text challenge (reply with Y/N), IVR and others.
